# how to classic curl

**products** ghd curve™ classic curl tong, ghd style curl hold spray, ghd style final fix hairspray, ghd detangling comb & sectioning clips

**step 1** Select parting, section hair from crown to ears and clip away front sections. Starting from the nape of the neck take a 4cm horizontal section and spritz with ghd style curl hold spray.

**step 2** Take a vertical sub section of approx 2 cm wide, keeping the hair flat and smooth. Holding the ghd curve™ classic curl tong vertically, open the clamp and wrap the hair around the barrel from the base towards the tip. Secure the end with the clamp.

**step 3** Hold for 5-8 seconds then release the clamp and let the hair fall. Continue with the same technique to complete, working upwards to the crown.

**step 4** Unclip the side sections, following the same sectioning pattern to finish, keeping your ghd curve™ tong vertical and wrapping the hair away from the face to create width and volume.

**step 5** Use a ghd detangling comb to dress out the curls, loosen and add volume. If extra lift is required backcomb at root and finish with ghd style final fix hairspray.

ghd curve™ has been designed by our team of ghd scientists to give you the good hair day that you deserve. Visit [ghdhair.com/curve](http://ghdhair.com/curve)
